PROJECT NAME	Asset Management Portal

Architecture of ServiceNow

- Third-party system sends data via REST API to ServiceNow.
- Scheduled Import collects data into Import Sets.
- Transform Map processes and maps data to target tables.
- Data is stored in the Incident Table.
- Incident Table links to CMDB Tables for asset/configuration info.
- Triggered actions automate tasks like notifications or escalations.
- Responses/actions can be sent back to the third-party system.
